

Cohere reranker

 Copy page

Cohere is a Canadian startup that provides natural language processing models that help companies improve human-machine interactions.

This notebook shows how to use Cohere's rerank endpoint in a retriever.

```
pip install -qU cohere
```

```
pip install -qU faiss
```

```
# OR (depending on Python version)
```

```
pip install -qU faiss-cpu
```

```
# get a new token: https://dashboard.cohere.ai/
```

```
import getpass
```

```
import os
```

```
if "COHERE_API_KEY" not in os.environ:
```

```
    os.environ["COHERE_API_KEY"] = getpass.getpass("Cohere API Key:")
```

```
if "LANGSMITH_API_KEY" not in os.environ:
```

```
    os.environ["LANGSMITH_API_KEY"] = getpass.getpass("Langsmith API Key:")
```

```
print(  
    f"\n{'-' * 100}\n".join(  
        [f"Document {i + 1}:\n\n" + d.page_content for i, d in enumerate(  
    )  
    )  
)
```

Set up the base vector store retriever

Let's start by initializing a simple vector store retriever and storing the 2023 State of the Union speech (in chunks). We can set up the retriever to retrieve a high number (20) of docs.

```
from langchain_community.document_loaders import TextLoader  
from langchain_cohere import CohereEmbeddings  
from langchain_community.vectorstores import FAISS  
from langchain_text_splitters import RecursiveCharacterTextSplitter  
  
documents = TextLoader("../..how_to/state_of_the_union.txt").load()  
text_splitter = RecursiveCharacterTextSplitter(chunk_size=500, chunk_overlap=  
texts = text_splitter.split_documents(documents)  
retriever = FAISS.from_documents(  
    texts, CohereEmbeddings(model="embed-english-v3.0")  
)  
.as_retriever(search_kwargs={"k": 20})  
  
query = "What did the president say about Ketanji Brown Jackson"  
docs = retriever.invoke(query)  
pretty_print_docs(docs)
```

Doing reranking with CohereRerank

Now let's wrap our base retriever with a `ContextualCompressionRetriever`. We'll add an `CohereRerank`, uses the Cohere rerank endpoint to rerank the returned results. Do note that it is mandatory to specify the model name in `CohereRerank`!

```
from langsmith import Client
from langchain_classic.retrievers.contextual_compression import (
    ContextualCompressionRetriever,
)
from langchain_cohere import ChatCohere, CohereRerank

llm = ChatCohere(temperature=0)
compressor = CohereRerank(model="rerank-english-v3.0")
compression_retriever = ContextualCompressionRetriever(
    base_compressor=compressor, base_retriever=retriever
)

compressed_docs = compression_retriever.invoke(
    "What did the president say about Ketanji Jackson Brown"
)
pretty_print_docs(compressed_docs)
```

You can of course use this retriever within a QA pipeline

☰ Cohere reranker

```
def format_docs(docs):  
    return "\n\n".join(doc.page_content for doc in docs)  
  
qa_chain = (  
    {  
        "context": compression_retriever | format_docs,  
        "question": RunnablePassthrough(),  
    }  
    | prompt  
    | llm  
    | StrOutputParser()  
)
```

```
qa_chain.invoke("What did the president say about Ketanji Jacksor
```

```
" The president speaks highly of Ketanji Brown Jackson, stating
```
